#1

How to dump all private keys which consist bitcoins.

I know how to dump single private key but when I make transaction change can coming back to one hidden address

Which wallet are you using?

Bitcoin Core 0.11.2

the command is `dumpwallet` you can use it from the terminal and you must give it a full path, e.g.

```
dumpwallet c:\mykeys.txt
```

If you have set a password you need to unlock the wallet first. The below command will unlock it for 60 seconds.

```
walletpassphrase PASSWORD 60
```

They will be exported unencrypted(!) so be careful.

Yes, you can filter it for "change" and "label" (all used received addresses should have a label).

Code:

Ignore

Thank you very mach I hope this is addresses not from your wallet 🙄
So only used addresses have "label" and "change" & "reserve"addresses is not important - right?

The private keys that shorena posted are for testnet, so they don't matter.

16mT7jrpknJBD7

Those addresses are still important. After you send from you wallet, the change addresses are for your change and the reserve addresses are where you get new addresses from. When you click on "New" in the receiving addresses window, you are getting an address from the list of reserve

Ignore

addresses. Change addresses will also be able to spend Bitcoin as Bitcoin Core uses a new change address for the change of every transaction.

Those addresses are still important. After you send from you wallet, the change addresses are for your change and the reserve addresses are where you get new addresses from. When you click on "New" in the receiving addresses window, you are getting an address from the list of reserve addresses. Change addresses will also be able to spend Bitcoin as Bitcoin Core uses a new change address for the change of every transaction.

Thank you @knightdk to clear for me - I like to migrate to another wallet like Electrum so for me was important to know So I can filter only "label"&"change"
